## New Demonstration Case for Misati Products

Misati, expert in automating transfer bars, presents an interesting solution that enables you to know, compare and talk about the most suitable products for your transfers.

Mechanical technicians often need to see, imagine, touch and test the elements to be used in order to accept responsibility for the application.

In order to help our customers, **Misati has prepared a free demo case with all the necessary material to build a transfer**, which will let you examine and talk with your colleagues while actively searching for the best solution, with creativity and autonomous development.

Thanks to our demo case, you will be able to **discover in a simple and practical way the different Misati elements** and identify the best option for your projects.

**We deliver this suitcase to our customers so that they can:**

- ...find out what is new.
- ...study and practice different assemblies.
- ...test Misati elements.

## Benefits of the demonstration case for the customer:

- **Better knowledge:** The user can know and test the product before purchasing it.
- **More security:** You can test the characteristics of the elements without being conditioned to a purely commercial presentation by the supplier.
- **Practical testing:** To ensure the correct functioning of the products.
- **More confidence:** The most important thing is the relationship that is established between the customer and the effectiveness of the product.

## Benefits of using the Misati demonstration case:

Technicians can have a real experience in integrating the components into their projects.

Custom designed and manufactured, **our case contains all the elements necessary to build a transfer**, and can be requested free of charge and with no obligation to purchase at a later date.
